DETAILED ACTION

1. The Applicants' preliminary amendment filed on November 18, 2003 was received. The specification is amended.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-2 and 4-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In Claim 1 (lines 8-9), it is not clear as to what derivative the term "perfluoroparaffin derivative" refers to because typically perfluoroparaffin is itself relatively inert toward chemical reaction under the normal condition.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Tarumi (US 5 837 774).

Tarumi discloses a curable fluoropolyether rubber composition comprising components A) to D). (col. 1, line 45 to 67 and Examples) Each component is further described in col. 2, line 4 to col. 9, line 17. Note that the methods of preparing Component B) are described in col. 5, line 43 to col. 6, line 59. Since Component B) reads on Applicants' Component C), both should have the same properties such as powder form, volatility, etc. The composition can be cured into films, sheets, etc. (col. 1, lines 13-16 and Examples) For Claim 5, Applicants should notice that "for use in automobiles, or fuel cells" is merely an intended use, and does not carry any weight of patentability.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject

matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tarumi in view of Matsuda (US 6 160 074).

Tarumi discloses an article derived from a curable fluoropolyether rubber composition, supra, which is incorporated herein by reference. Tarumi is silent the specific article set forth in the instant claim. However, Tarumi's films are well suitable for making sealing members, O-rings, etc. because of their excellent heat resistance, chemical resistance, solvent resistance, releasability, lubricating qualities, oil resistance, etc. (col. 1, lines 39-44) For example, Matsuda teaches the use of a substantially similar curable fluoropolyether rubber composition for making sealing members, O-rings, etc. (col. 1, lines 20-38) Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to utilize Tarumi's composition for making film/sheet articles such as sealing members, O-rings, etc. with expected success.
